EDUCATION

Northeastern University - Boston, MA

Sept 2024 - April 2026

Master of Science in Software Engineering Systems-

Grade: 3.627/4.0

- Developed 4 WCAG-compliant accessible web platforms (Flask, React, CI/CD) under Dr. Mona Minkara; deployed services using cloud environments and CI/CD pipelines to support production-style workflows.

Dharmsinh Desai University - Nadiad, Gujarat, India

Jul 2019 - May 2023

Bachelor of Technology in Information Technology

- Leadership: Organized and mentored technical workshops and hackathon teams.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript/TypeScript, C++, C, Swift, Dart

Core CS: Data Structures & Algorithms, OOP, Design Patterns, Complexity Analysis, Distributed & Parallel Systems

Backend: Spring Boot, REST APIs, distributed systems, scalable microservices, Unix/Linux, CI/CD pipelines

Frontend: React, Angular, HTML/CSS, Flutter, SwiftUI — including WCAG-compliant accessible UI development

ML & AI: PyTorch, LoRA (PEFT), NLP, Generative AI, TensorFlow Lite, Model Fine-Tuning, Reinforcement Learning

Databases: SQL, PostgreSQL, MySQL, MongoDB, Firebase, Core Data

Tools: Git (branching strategies), CI/CD workflows, Agile development practices, Selenium, Cucumber, Adobe Illustrator

Google Cloud Certifications: [Google Cloud Platform](#)

WORK EXPERIENCE

PTC Inc, Boston, MA, United States

Software Developer Intern | Java, Typescript, Angular, Git

June 2025-August 2025

- Developed Java-based **RESTful APIs** on PTC's Onshape platform enabling CSV-based data import for automated part configurations, eliminating manual data entry workflows across large-scale enterprise **CAD** operations.
- Enhanced configuration panel UI using **TypeScript** and **Angular** — surfacing default values via tooltips and improving discoverability of advanced options in a distributed web application, reducing user confusion and setup errors.
- Investigated and resolved production issues in a **Unix/Linux** environment by analyzing logs and distributed traces; owned features end-to-end from design through production release, improving reliability and reducing recurring defects.
- Collaborated cross-functionally with PMs, designers, and QA through code reviews, sprint planning, and **CI/CD** workflows to deliver maintainable, production-grade software.

Firebolt LLC, Ahmedabad, Gujarat, India

Flutter Developer | Flutter, Dart, Hive, Firebase, Git

July 2023 - July 2024

- Led **end-to-end development in a startup environment**, owning frontend, backend integration, deployment, and production releases using Flutter
- Independently published **15+** applications on Play Store, App Store as well as Mac Store contributing significantly to company success
- Supervised and mentored 2 interns, elevating team productivity and skill development by 30% through efficient task delegation

Crest Data Systems, Ahmedabad, Gujarat, India

Software Engineer Intern | Java, Spring, SpringBoot, ReactJs, Git, Bitbucket

Dec 2022 - Mar 2023

- Contributed to building an E-commerce product catalog with **Java**, developing and implementing **10** key functionalities
- Applied theoretical knowledge to achieve **30%** reduction in loading time, enhancing overall performance as a **Full-Stack Developer**

EVOLVEINNO INC (NearLikes), Hyderabad, Telangana, India

Mobile Application Development Intern | Flutter, Dart, Git

Sep 2021 - Nov 2021

- Overhauled NearLikes UI, seamlessly integrating diverse **APIs** to elevate overall functionality and user experience
- Demonstrated agility in resolving bugs & swiftly incorporating new features, ensuring a continuously refined development process

PROJECTS

Cyberbullying Risk Detection System | Python, PyTorch, Hugging Face, LoRA

Feb 2026

- Built a scalable ML training and inference pipeline for multi-class text classification using parameter-efficient fine-tuning (LoRA).
- Designed reproducible workflows with checkpointing, structured logging, and performance monitoring to improve model reliability.
- Conducted error analysis and hyperparameter optimization to improve macro-F1 performance across imbalanced datasets.
- Built an interactive inference interface using Gradio to evaluate model predictions and confidence scores on unseen data.

IdeaBoard – Social Innovation Sharing Platform | Java, Spring Boot, Hibernate, JSP, MySQL, Tomcat

Nov 2025

- Designed and implemented a full-stack platform enabling users to post, comment, and vote, using MVC architecture and REST APIs for scalability
- Applied MVC architecture with annotated JPA entities and controllers to ensure scalable backend design and clean separation of concerns.

ScanMate Application | SwiftUI, UIKit, Core Data

April 2025

- Architected a document processing system with OCR extraction, structured storage, and offline-first access using SwiftUI and Core Data
- Designed an indexed data model with custom tagging to support fast retrieval at scale and future cloud sync

PROFESSIONAL INVOLVEMENT

SheHacks DTU hackathon

March-2021

- Aprotech, our team, clinched the **Most Innovative Track Prize** for our groundbreaking work. We successfully developed a **Flutter** application (Android & IOS) that showcases our innovation and expertise in the field

Progate Web Development Week

Dec 25th - 31st Dec 2020

- Organized and mentored a Web Development Week on Progate, assisting students with technical queries and web concepts.
